Chad Koslovsky

Network and systems engineering | Dependable operations

Milliken, Colorado · chad@koslovsky.xyz

Senior Network Engineer | Platte River Power Authority

View my interactive resume and work: https://prpa.koslovsky.xyz

01 PROFILE

I work where networks, systems and the people using them meet. At FRII, I ran the NOC, handled escalations and modernized infrastructure. Client work has kept me close to branch connectivity, user access and the cost of keeping an environment running. I bring that operational perspective to supporting dependable systems for Platte River's team.

02 EXPERIENCE

Founder / Product Engineer / Systems Lead · Technomancy IT LLC | Present

Own client systems from infrastructure decisions through deployment and direct on-call support, coordinating specialists when a project needs them.

Build tenant-aware services and authenticated integrations that keep access and support boundaries explicit.

Senior Systems Engineer / Datacenter Architect · Front Range Internet Inc. | 2015-2020

Ran the NOC and led infrastructure work through a company purchase; later held sole systems-engineering responsibility for about a year, with NOC staff escalating unresolved issues to me.

Migrated Hyper-V and VMware ESXi workloads into Docker and Kubernetes, upgraded servers and firewalls, and ran SOC 1/SOC 2 audits with documented controls and operating procedures.

Systems / Software Engineer · Office Evolution | 2014-2015

Built shared applications connecting CRM, provisioning, onboarding and service operations across locations.

Worked with the CEO and CIO and turned cross-department handoffs into explicit workflows.

Network & Systems Engineer · PlumChoice / Everon | 2012-2014

Engineered and troubleshot networks, systems and endpoints for managed-service clients, including on-call support.

Built diagnostic and support tooling for recurring problems and worked directly with business owners and end users.

Infrastructure and Systems Focal · IBM | 2010-2012

Operated shared enterprise infrastructure and coordinated changes, incidents and escalations across application, infrastructure, vendor and business teams.

Automated audit and backup workflows and managed hosted desktop platforms and virtualization test labs.

03 SELECTED WORK

FRII | Infrastructure modernization and escalation · Front Range Internet Inc. | Employee engineering work | 2015-2020

At an internet service provider, I migrated Hyper-V and VMware ESXi workloads into Docker and Kubernetes and upgraded server and firewall infrastructure. Alongside that modernization, I ran the NOC, handled escalations, and connected monitoring and recovery verification with documented operating procedures.

Excell Services | Legacy networks and branch access · Technomancy IT client | Wray, Colorado

For Excell Services LLC, a major Technomancy IT client in Wray, I rebuilt or replaced legacy servers and employee computers, upgraded networks, and helped open a satellite location. VPN connectivity, Windows Server and Active Directory gave corporate users needed access; investigating wasted network costs also secured a one-time $15,000 CenturyLink refund.

ProofMark | Identity and signing records · Client engineering | Contribution completed

For ProofMark, a document-signing client project, I completed a contribution spanning identity, PDF fields, routing and audit history. I designed the signing workflow with explicit security-sensitive state, verification and fallback paths, joining UI, APIs and data around the document and its signing record. That work is part of an AGPL/open-source product.

04 CAPABILITIES

Networking, VPNs, DNS and firewall upgrades · NOC monitoring and incident escalation · Windows Server, Active Directory and virtualization · Operating procedures, recovery verification and SOC audits · CompTIA Network+ and A+ (earned)
